

Evidencia Científica vs Evidencia Clínica

Luis Palomeque Pt.DO.PhD.

Desde la investigación intentamos dar respuestas, a través del método científico, a lo que hacemos

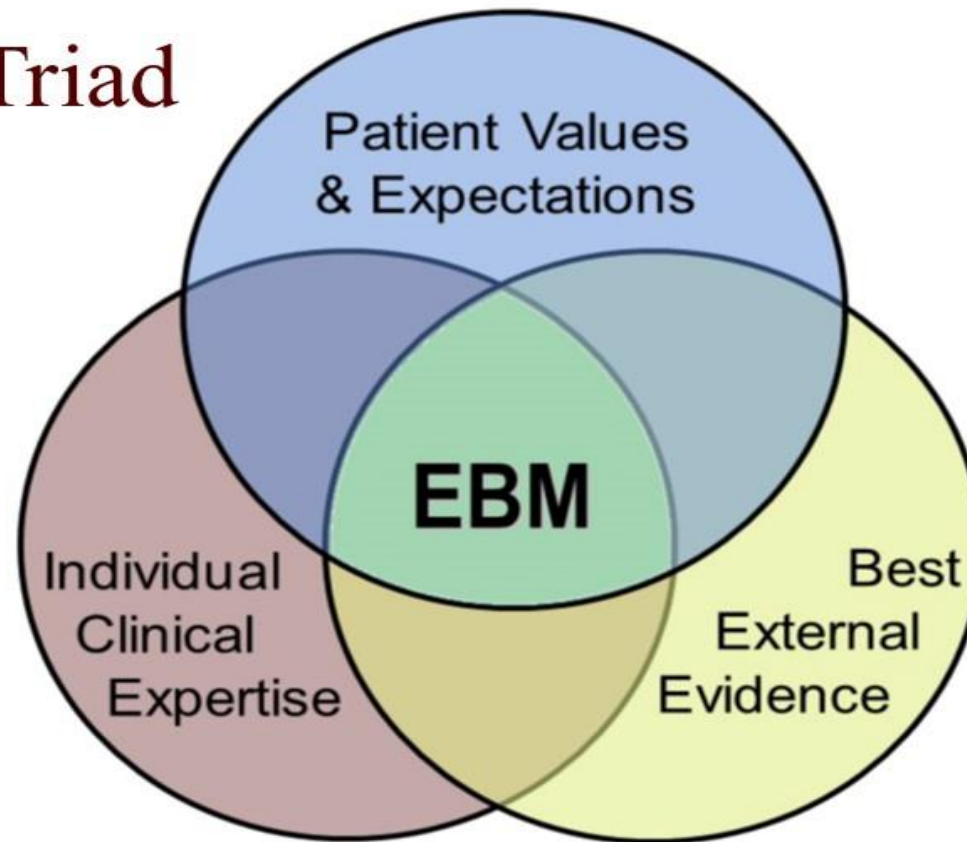

DEFINICIÓN DE EBM (Guyatt, 1992, McMaster University)

The EBM Triad

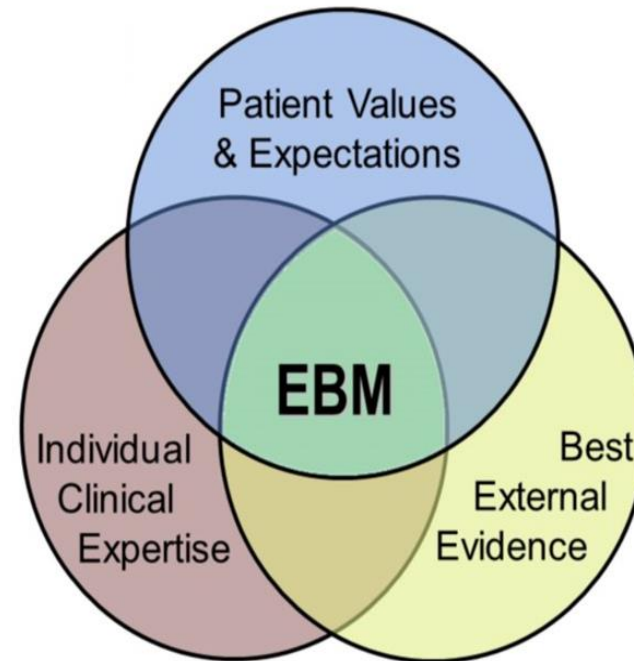

Armstrong, E.C. (2003) Harnessing new technologies while preserving basic values. *Fam Sys & Health*, (21)4, 351-355.

LA CUESTIÓN (EBM vs PatientBM)

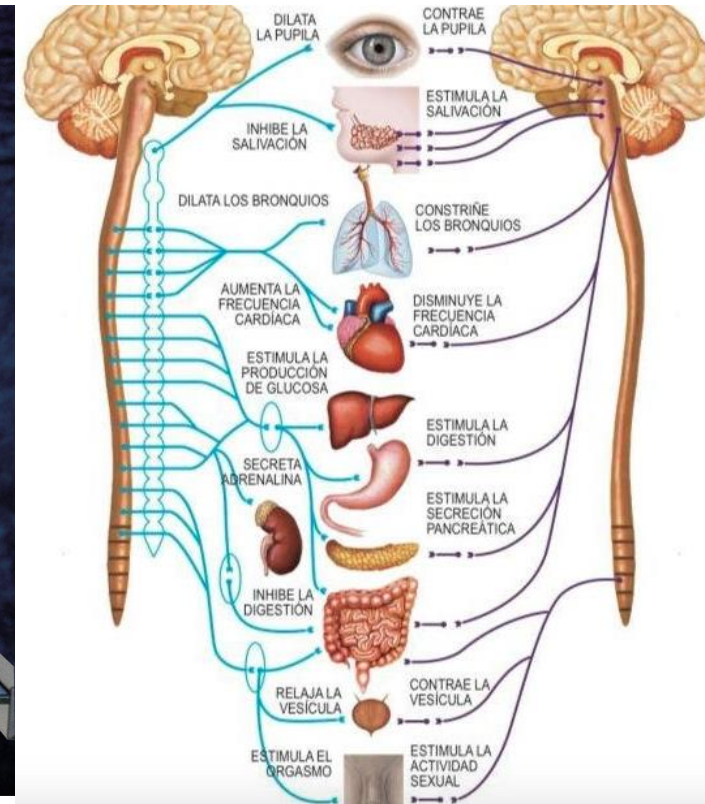

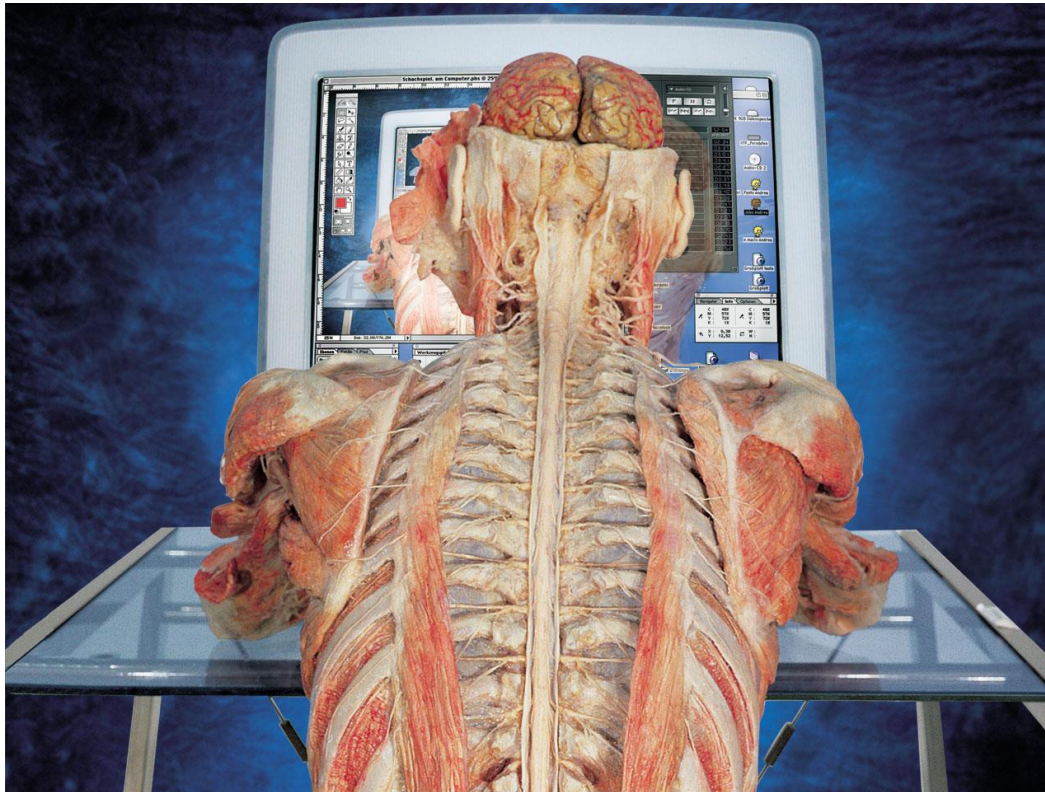

El problema filosófico es que nunca hay una garantía de que la decisión para la mayoría de las personas sea la mejor para el paciente individual

RAZONAMIENTO CLÍNICO

Todo lo organiza el Sistema Nervioso Central

The term *regional interdependence* may conjure up in the minds of readers the thought of interrelated geography, culture, or commerce, whereby one event in one of these areas affects events in a separate and possibly distant region. With respect to musculoskeletal problems, regional interdependence refers to the concept that seemingly unrelated impairments in a remote anatomical region may contribute to, or be associated with, the patient's primary complaint.²⁵
